

The Synerway Appliance protects data for Dodin Campenon Bernard

DODIN CAMPENON BERNARD, a subsidiary of Vinci Construction, began business in June 2008 born from a merger of the activity in 2003 of the companies Dodin and Campenon Bernard TP France. Today, Dodin Campenon Bernard undertakes civil engineering and tunneling projects for VINCI Construction in mainland France and on the Island of La Réunion.

In 2010, DODIN CAMPENON BERNARD purchased a Synerway Appliance to replace their existing magnetic tape backup solution. The company chose **unified protection** to guarantee their **business continuity** (DRP = Disaster Recovery Plan) and improve security for all their data: from office data to professional databases. Synerway's solution enabled **immediate restoration possibilities** and **optimal accessibility**.

« The choice of solution was clearly guided by the efficiency of the data restoration procedures. We ensure business continuity and free up valuable time every day for other essential activities. »

The LA16000 Appliance, with a 16 TB Raid 5 disk capacity was chosen for the **simplicity of its operational capacity, its native disk backup and restoration performance** and its total **reliability** in all situations. "Thanks to the **userfriendly interfaces** and the intuitive supervision and administration tools along with a genuinely simple restoration approach" remarks Franck Noze, IT Manager at DODIN CAMPENON BERNARD. With the protection of their 15 production servers, Franck is witness to the **rapid restoration capacity** the Synerway Appliance now provides.

Franck Noze,
IT Manager
Dodin Campenon Bernard

The Synerway solution is fully adapted to the professional needs of DODIN CAMPENON BERNARD, but also to the company's specific security requirements. Data backup for 10 executive laptops was also integrated into their security policy. To the local diskbased backups of these sensitive machines, we have added centralized consolidation to a remotely located Synerway Appliance. According to needs, a restoration can be performed either by the IT team or by the users themselves completely autonomously. In addition, the choice of block mode technology (where only the data blocks modified in a file are backed up) enables **optimal backups** whatever the available bandwidth. The Synerway supervision and administration tool, dedicated to laptops or other roaming machines, enables you to manage effective data protection for all local and remote machines. And, lastly, for complete **peace of mind**, all backed up data is copied from the Synerway Appliance disks to magnetic LTO5 tapes (1.5 TB per tape). These tapes are taken off site **each week** to a secure location.

Franck Noze acclaims the **quality of service** associated with the solution and is entirely satisfied two years into production of the Synerway Appliance: "The choice of solution was clearly guided by the efficiency of the data restoration procedures. We ensure business continuity and **free up valuable time every day** for other essential activities".

About Synerway

Synerway designs and supports a range of **data backup and restoration Appliances and software dedicated to IT protection** with storage space ranging from 1 TB to 96 TB (Raid 5). Many SMEs, local authorities and multi-site corporate clients use Synerway Appliances on a daily basis to protect their Information Systems.
